UV Ratings

As part of our commitment to sun protection, Shelta places a major emphasis on advising consumers of our product UVE ratings as per Australian Standards 4174:2018 Knitted and Woven Shade Fabrics. We take care to select high quality dense fabrics that look great, as well as help to protect your skin. It is vital for Shade product users to understand that they could receive many times more UV from sunlight reflected under the umbrella from sand, water and other surfaces than will be transmitted through the umbrella. The only remedy for this is shade clothing and sunscreen.

SUNBRELLA™ ACRYLIC	UVE Category - Most Effective	Over 99% UV Effectiveness
O'BRAVIA™	UVE Category - Most Effective	Over 99% UV Effectiveness
OLEFIN	UVE Category - Most Effective	95 - 98% UV Effectiveness
POLYESTER	UVE Category - Effective to Very Effective	Over 90 - 94% UV Effectiveness
